Agenda

1. Ansible – Was ist das?
2. Warum ist es für Entwickler interessant?
3. Einführung in Ansible
4. Wie unterscheidet sich Ansible zur seiner Konkurrenz?
5. Weitere Einsatzszenarien aus Entwicklersicht

Ansible

Was ist das?

Ansible

- Software für

Einführung in Ansible

Ansible

- Software für
 - Konfigurationsmanagement,
 - Softwareverteilung und
 - Ad-hoc-Kommando-Ausführung
- Sprache: Python
- Ansible Skripte: YAML

Funktionsweise

Exkurs: YAML

YAML

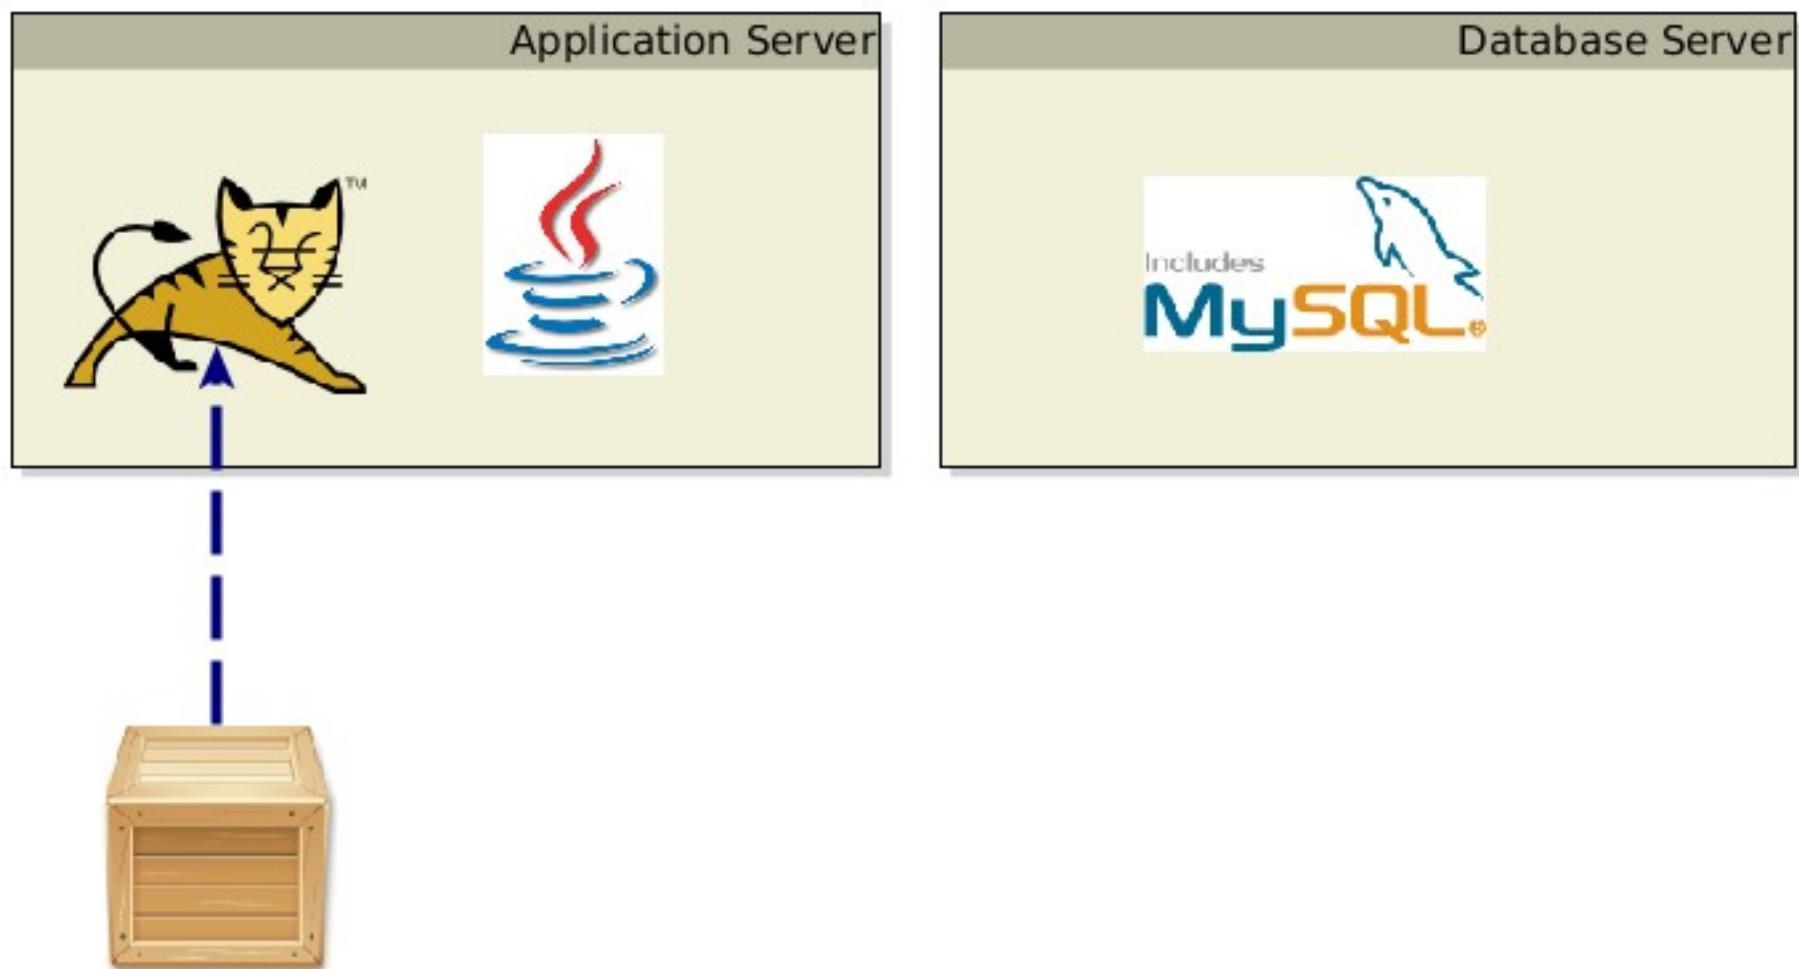

```
---
```

```
foo: "bar"
baz:
  - "qux"
  - "quxx"
corge: null
grault: 1
garply: true
waldo: "false"
fred: "undefined"
emptyArray: []
emptyObject: {}
emptyString: ""
```

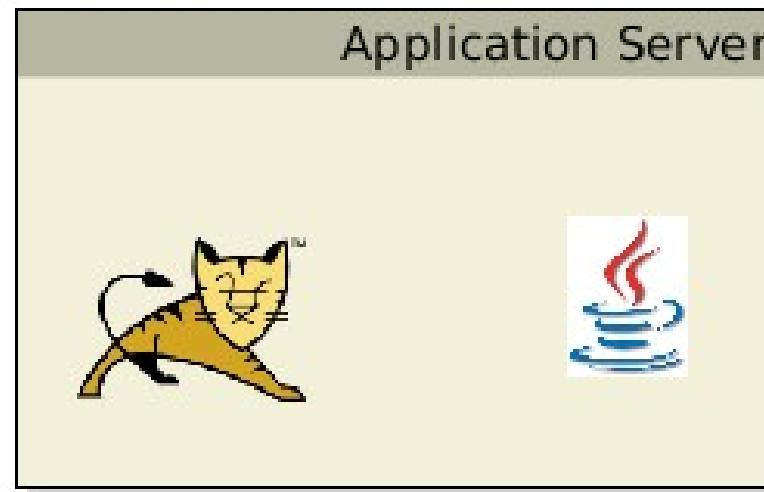

JSON

```
{
  "foo": "bar",
  "baz": [
    "qux",
    "quxx"
  ],
  "corge": null,
  "grault": 1,
  "garply": true,
  "waldo": "false",
  "fred": "undefined",
  "emptyArray": [],
  "emptyObject": {},
  "emptyString": ""
}

deploy-on-tomcat Role

The screenshot shows the file structure and content of the `deploy-on-tomcat` role within an `ansible` project. The tree view on the left lists the following files and folders:

- `ansible`
- `roles`
 - `deploy-on-tomcat`
 - `defaults`
 - `main.yml` (selected)
 - `tasks`
 - `cleanup-webapp.yml`
 - `deploy-webapp.yml`
 - `main.yml` (selected)

 - `tasks`
 - `cleanup-webapp.yml` (selected)
 - `deploy-webapp.yml`
 - `main.yml`
 - `start-tomcat.yml`
 - `stop-tomcat.yml`
 - `deploy-demo.yml`

The right pane shows the code content for the selected file, `cleanup-webapp.yml`:

```
1   name: cleanup {{ webapp_target_name }}
2     file: name={{tomcat_app_base}}/{{webapp_target_name}} state=absent
3
```

deploy-on-tomcat Role

The image shows a file explorer on the left and a code editor on the right.

File Explorer:

- ansible

deploy-on-tomcat Role

The screenshot shows the file structure and content of an Ansible role named 'deploy-on-tomcat'. The structure is as follows:

- ansible/roles/deploy-on-tomcat/
 - defaults/main.yml
 - tasks/cleanup-webapp.yml
 - tasks/deploy-webapp.yml
 - tasks/main.yml
 - tasks/start-tomcat.yml (highlighted in blue)
 - tasks/stop-tomcat.yml
- deploy-demo.yml

The right pane displays the content of the 'start-tomcat.yml' file:

```
1   name: start tomcat
2     #service: name=tomcat state=started
3     command: service tomcat start
4
5 - name: wait for tomcat to start

- Autovervollständigung für Roles

The screenshot shows the IntelliJ IDEA interface with the 'ansible' project open. The 'setup-app-roles.yml' file is the active editor. The code completion feature is demonstrating autocompletion for roles. The cursor is at line 5, position 1, where the opening brace of a role definition is highlighted. A completion dropdown menu is open, listing several options: 'deploy-on-tomcat', 'jdk', 'mysql', 'roles', and 'tomcat8'. The 'roles' option is currently selected. The status bar at the bottom right indicates: 'Dot, space and some other keys will also close this lookup and be inserted into editor'.

- Anzeige der Dokumentation für Ansible Module

The screenshot shows the IntelliJ IDEA interface with several tabs at the top: setup-app.yml, setup-app-roles.yml, setup-db.yml, and main.yml. The main editor window displays an Ansible playbook. A specific line of code, `file: name=/opt mode=777`, is selected and highlighted in yellow. To the right of the editor, a documentation panel titled "Documentation for file" is open, showing the Ansible "file" module documentation. The documentation includes sections like Synopsis, Options, Examples, and Notes. The "Synopsis" section is currently expanded, describing the module's function in setting attributes for files, symlinks, and directories.

The screenshot shows the IntelliJ IDEA interface with several tabs at the top: "setup-app.yml", "setup-app-roles.yml", "tomcat8/.../main.yml", and "setup-db.yml". Below the tabs, there's a navigation bar with buttons for "roles" and "role". A tooltip is displayed over the "role" button, showing the path "/ansible/roles/tomcat8/tasks/main.yml". The main editor area contains Ansible YAML code:

```

The screenshot shows the IntelliJ IDEA interface with several tabs at the top: setup-app.yml, setup-app-roles.yml, tomcat8/.../main.yml, setup-db.yml, jdk/.../main.yml, and cleanup-webapp.yml. The main editor area displays an Ansible YAML configuration. A search dialog is open, with the text "tomcat" entered. Below the search bar, a list of results is shown, each with a preview icon, the role name, and the file path. The results include:

- ROLE: tomcat8 (ansible/roles)
